

# How to validate procedures? (available in 4.1)

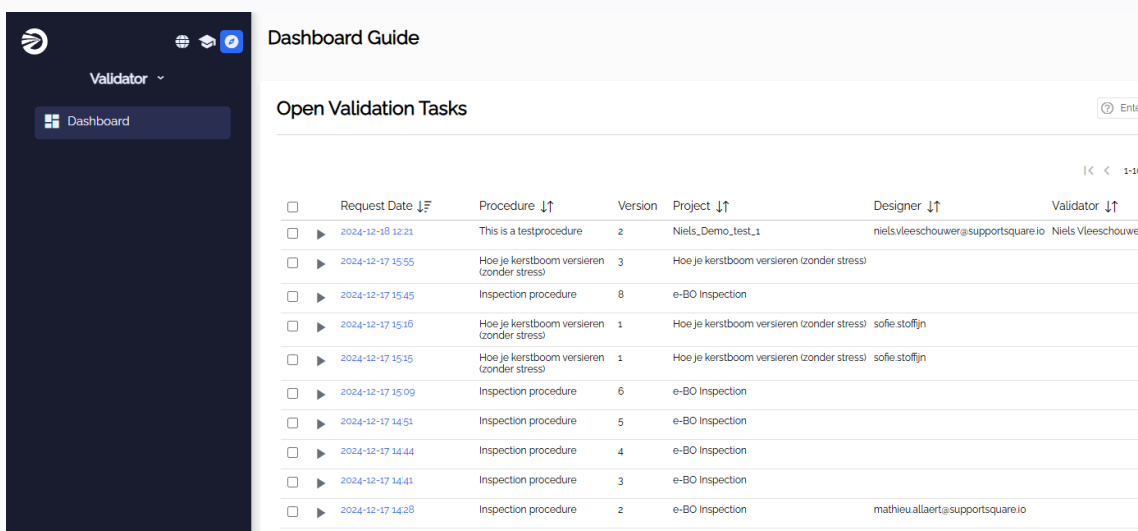

Created procedures need to be validated before they can be scheduled and used by trainees.

## Note

Make sure you have the **Validator** role. You can change roles by clicking on them and switch to another one in the list.

## Tutorial before 4.0

Your browser does not support the video tag.

The screenshot shows a web application interface for a 'Validator' role. On the left is a dark sidebar with a 'Dashboard' button. The main content area is titled 'Dashboard Guide' and 'Open Validation Tasks'. Below this is a table with columns for 'Request Date', 'Procedure', 'Version', 'Project', 'Designer', and 'Validator'. The table contains 11 rows of data, each representing a validation task.

<input type="checkbox"/>	Request Date ↓↑	Procedure ↓↑	Version	Project ↓↑	Designer ↓↑	Validator ↓↑

- In the Dashboard you will see procedures that you can validate. These aren't always assigned to you specifically but you can easily assign yourself.
